Adobe Connect, Google Chrome 69, and Flash Settings

The soon-to-be-released Google Chrome 69 (due on/about September 4, 2018) will change how it stores Flash settings.

"At present, if a user enables Flash for a particular site, they don't need to approve it if they visit the site again. However, in Chrome 69, every time users restart Chrome, they'll need to give permission for sites to use Flash." ([ZDNET Article](http://www.zdnet.com/article/chrome-69-is-coming-not-just-a-new-look-but-flashes-life-is-about-to-get-even-harder/))

For Adobe Connect, you will need to re-allow [connect.johnshopkins.edu](http://connect.johnshopkins.edu) to use Flash every time you restart Chrome.

We have steps on how to do this at [Check the version of Flash Player and Adobe Connect Meeting Add-In](http://help.sset.jhu.edu/x/FIC_AQ) under "Enable Flash for Google Chrome".
