Adobe Connect and Mac OS X 10.9 (aka Mavericks)

We've had success using Adobe Connect 9.1 and Mac OS X 10.9 (Mavericks). Hopefully, this page will help you get through issues related to Mac OS X 10.9.

**Recommendation: use the Safari browser.**

While the latest Firefox should work, we've heard some anecdotal cases where it has not. Do not use Chrome browser.

2. Get and install the latest Adobe Connect Add-In (see [http://helpx.adobe.com/adobe-connect/kb/latest-connect-91-addin.html](http://helpx.adobe.com/adobe-connect/kb/latest-connect-91-addin.html))
3. Remove sandbox restrictions from your Safari player
4. Verify you are using the Adobe Connect Add-In when you run meetings (see [Check the version of Flash Player and Adobe Connect Meeting Add-In](http://www.adobe.com/support/documentation/en/flashplayer/help/)
